

## **ClimaPod Virtue Greenhouse, extra door assembly.**

### Option 1.

If you purchased ClimaPod with extra door set, and just starting to install it, please follow and apply the same instruction for door assembly for both sides of your greenhouse (front and back gables).

### Option 2.

If you are adding extra door set to existing previously build ClimaPod greenhouse, please follow the following steps to install the door for the back gable:

Step 1: Disconnect and take down the whole back gable from existing greenhouse, as well as the end side panels of the side walls of the greenhouse.

Step 2: Once removed, place the back gable on flat surface. Then, dismantle the back gable, and use the purchased extra door set to build a new back gable with the door. Follow the door assembly instructions from the original greenhouse manual to build it.

Note: Some parts are included with the extra door set, but some of the frames (V903, V904, V009, 012) should be used from the solid back wall gables to build the new gable with the door.

Step 3: Connect then new gable with the door set to existing greenhouse frame, without tightening the bolts

Step 4: Insert the side panels to greenhouse same as per manual before.
